Asset Lifecycle Management

Asset management solutions provide the underlying systems and processes that allow organisations to implement effective asset management practices, thus realising the benefits of:

- Total asset lifecycle management from planning, procurement, deployment, maintenance and disposal.
- Collection and reporting on whole of asset lifecycle costing information for informed financial decision making.
- Improving asset reliability and performance.
- Maximising labour force efficiency.
- Inventory and materials optimisation.

AWM

Asset Lifecycle Management's Asset and Works Management (AWM) solution is a structured approach to managing maintainable assets to achieve efficiencies through the planning and controlling of physical resources.

The system enables company assets to be tracked and managed including facilitating maintenance and disposal to achieve optimum service delivery potential and to minimise risks and costs.

Easy to use, the system can produce work orders, equipment and maintenance reports and facilitate budgeting through its costing facilities.

Work Orders

With the Asset and Works Management System, Work Orders can be adjusted to suit your business:

- Automatic or manual generation of Work Orders.
- Extensive sort and search criteria.
- Permanent record work history.
- Full Work Order and equipment costing including material costs, labour costs and other associated costs.
- Cause and Remedy codes for failure analysis.

Maintainable Asset Details

A full register of all assets allows timely and appropriate maintenance and review of assets:

- Extensive asset detail categories including description, operation, maintenance, location, and future needs.
- Multiple user defined asset numbers with multiple levels or sections to differentiate the category of asset.
- Asset numbers can be grouped with similar items to enable searching within a broad category without the identifying number.

Costing

This process assists you to enhance your business productivity and return on investment through:

- Job costing facilities.
- Estimated costs can be compared against actuals showing the differences.
- Internal/External job charging can be used to make invoicing easier.

Integration

The AWM product integrates with third party financial applications and is fully integrated with other Asset Lifecycle Management products including:

- Fleet Management
- Evidence Based Treatment Projection
- Strategic Asset Management

For further information or a demonstration of the capabilities of Asset Lifecycle Management's AWM product, call us on the numbers below or visit our website.
